Frontken Q2 Profit Jumps 43pct On Stronger Core Business

Frontken Corp Bhd posted a higher net profit for the second quarter ended June 30, 2026.

KUALA LUMPUR: Frontken Corp Bhd posted a higher net profit for the second quarter ended June 30, 2026, supported by stronger performance from its core business and disciplined cost management.

Its net profit rose 42.5 per cent to RM47.72 million from RM33.48 million a year earlier, according to its Bursa Malaysia filing.

Frontken's revenue grew 19.4 per cent to RM186.91 million from RM156.43 million in the corresponding quarter last year, driven by stronger contributions from its Malaysian and Taiwanese subsidiaries.

It said revenue from its Malaysian subsidiaries surged 106 per cent from a year earlier, driven by higher sales from oil and gas supply-related activities, while revenue from its Taiwan subsidiary rose seven per cent.

"However, if we look at it on a like-for-like basis based on New Taiwan dollar, revenue from our Taiwan subsidiary would have reflected an even stronger growth of 18 per cent.

"Volume in the semiconductor space increased mainly due to higher demand and strong orders from our customers in Taiwan," it said.

No dividend was declared for the quarter.

For the six-month period, Frontken's net profit rose 39.5 per cent to RM90.07 million from RM64.55 million a year earlier, while revenue increased 30.3 per cent to RM376.72 million from RM288.99 million.

Frontken said it will continue prioritising operational excellence, technological innovation and disciplined execution.

The company said the semiconductor business remains supported by long-term structural demand, underpinned by artificial intelligence, high-performance computing, automotive electronics and advanced manufacturing.

Meanwhile, its oil and gas segment is expected to continue benefiting from sustained maintenance and production activities amid relatively stable energy market fundamentals.

"The group expects demand for specialised maintenance and engineering services to remain resilient and will continue to strengthen its execution capabilities to support customers' operational requirements while pursuing selective growth opportunities," it said.
