Frontken's Q3 Net Profit Jumps 30pct On Stronger Semiconductor Demand

Frontken Corp Bhd's net profit rose 29.8 per cent to RM45.83 million in the third quarter ended Sept 30, 2025, from RM35.32 million a year ago, mainly due to improved revenue and continual efforts to improve efficiency across the group.

KUALA LUMPUR: Frontken Corp Bhd's net profit rose 29.8 per cent to RM45.83 million in the third quarter ended Sept 30, 2025, from RM35.32 million a year ago, mainly due to improved revenue and continual efforts to improve efficiency across the group.

Quarterly revenue grew 12.2 per cent to RM161.87 million from RM144.31 million previously, mainly due to higher contributions from its subsidiaries in Taiwan and Malaysia, the group said in a filing to Bursa Malaysia.

Frontken said semiconductor-related volume increased, supported by higher demand and a favourable product mix from customers in Taiwan.

It added that its Kulim facility has fully resumed operations following last year's fire incident, contributing to improved performance. Earnings per share rose to 2.89 sen versus 2.24 sen in 3Q24.

For the first nine months of 2025, Frontken's net profit rose 11.8 per cent to RM110.39 million from RM98.71 million a year ago, while revenue grew 7.4 per cent to RM450.86 million from RM419.75 million previously.

Entering the second half of 2025 (2H25), Frontken said it remains encouraged by the strong performance of its semiconductor business, which continues to benefit from sustained demand across the artificial intelligence (AI) and high-performance computing sectors.

The group said the demand is underpinned by continued adoption of AI applications and infrastructure, with increasing token volumes and computational requirements driving robust activity across the semiconductor value chain.

In line with this, the group is planning some minor expansion and improvement works across its facilities in Taiwan to optimise space utilisation and enhance production capabilities.

The works are scheduled to take place in stages over the coming months to minimise any disruption to ongoing operations with full completion targeted in 1H26.

Frontken noted that these efforts will prepare the group for its upcoming project and enhance its ability to support customers' increasing demand in the coming year.

Furthermore, the group said amid dynamic conditions, it continues to place strong emphasis on operational efficiency and cost discipline.

"Our priority remains on delivering high quality services and continuously improving our capabilities to maintain our competitiveness and to deliver long term value to our stakeholders," it added.
