Frontken's 2Q net profit jumps to RM47.72mil

PETALING JAYA: Frontken Corp Bhd is keeping a positive outlook over the semiconductor industry off the back of a strong first-half performance, underpinned by an uptick in demand.

In a filing with Bursa Malaysia, the group said the industry is supported by long-term structural demand, driven by artificial intelligence, high-performance computing, automotive electronics and advanced manufacturing.

"While customers remain measured in their capital spending, the group continues to enhance its technical capabilities, expand service offerings and invest in capacity to support future growth opportunities," it said.

The group reported its net profit for the six-month period ended June 30, 2026 was nearly 40% higher at RM90.08mil, as compared to RM64.56mil during the same period in 2025.

This was underpinned by a 30% improvement in revenue to RM376.72mil over the same period, coupled with effective cost controls.

In the second quarter (2Q) alone, Frontken reported a higher net profit of RM47.72mil, as compared to RM33.49mil in the year-ago quarter.

Quarterly revenue rose to RM186.91mil from RM156.43mil, underpinned by higher contributions from its Malaysian and Taiwan subsidiairies.

The group declared a dividend of two per share, with the entitlement and payment dates to be announced at a later date.

Furthermore, revenue for its Malaysian subsidiaries increased 106% year-on-year mainly due to higher sales, according to the filing.
