B3. Prospects

Environment

Aligned with the Company's intended growth in the Environmental sector, Ranhill, in collaboration with strategic business partners, has established a Consortium as Project Promoters. The objective is to spearhead the 'Source-to-Tap' project, with the goal of extracting 6,000 liters per second (approximately 518 MLD) to provide treated water to four (4) regions, specifically DKI Jakarta Selatan, Bekasi City, Bekasi Regency, and Bogor Regency

The Consortium has re-submitted the Feasibility Studies ("FS") to the Ministry of Public Works and Public Housing of the Republic of Indonesia ("PUPR"). Following thorough discussions and negotiations, the Consortium is currently awaiting the approval of the FS and the designation of 'Initiator Status' before PUPR initiates a tender process for the project implementation

In Thailand, AnuRAK had submitted BOT Concession bids for

- 1. Upgrading existing reclamation water treatment plant no.2 in Amata City Rayong Industrial Estate from 7 MLD to 10 MLD.
- 2. New 20 MLD waste water treatment plant and 10 MLD reclamation water treatment plant in Amata Rayong Industrial Estate Phase 3.

The company's ability in providing customised solutions and specialized facilities to treat complicated wastewater with complex and demanding waste characteristics will serve as a competitive edge when bidding for contracts.

Energy

Our energy division had proposed an extension to the PPA for our 190MW Teluk Salut Power Plant beyond its existing concession term that expires in 2029. This is a possible solution to address the growth in energy demand in Sabah beyond 2029.

The consortium of Ranhill Sabah Energy Sdn Bhd has received the Letter of Notification as the successful bidder for the 100 MW CCGT in Kimanis, Sabah on 31 March 2023. The project is expected to achieve its Commercial Operation Date in October 2026. Currently, the consortium is finalizing the project documents su ch as Power Purchase Agreement ("PPA"), Equipment Supply Contract, Long Term Service Agreement and Engineering, Procurement, Construction and Commissioning ("EPCC") Contract. The consortium is expected to sign project documents in April 2024 and achieve Financial Close in July 2024.

As the Group pursues development of renewable energy in contributing to the country's energy transition to a cleaner and greener Malaysia, we are proud to announce that Ranhill's first venture into asset ownership of 50MWac large scale solar project in Bidor, Perak has achieved its Commercial Operation Date on 7 February 2024.

B3. Prospects (continued)

Engineering services

With Engineering Services being another business division of the Group, significant projects have been secured by Ranhill Worley Sdn Bhd ("Ranhill Worley") in Front End Engineering Design ("FEED") and Detailed Design Engineering ("DDE") of oil and gas facilities and installations as well as Carbon Capture & Storage ("CCS") projects. Ranhill Worley has proven to be a strong engineering services hub in securing major offshore projects and recognize as one of Worley's global businesses center of excellence for offshore projects worldwide.

Amongst others, these include world's largest offshore experience:

- 1) DDE of the new floating production, storage, and offloading ("FPSO") vessel, P-82 for Brazilian state-owned oil and gas producer, Petroleo Brasileiro S.A ("Petrobras"), one of the largest vessels to be deployed in the Buzios field, an ultra-deepwater oil and gas field covering an area of 853 km² in the pre-salt Santos Basin, about 180-km off the coast of Rio de Janeiro, Brazil;
- 2) DDE of two compression complexes associated with the North Field Production Sustainability Offshore Compression Complexes Project which includes two of the largest fixed steel jacket compression platforms ever built. The Qatar North Field is the world's largest natural gas field;and
- 3) DDE of Kasawari CCS Project (the world's largest offshore CCS project, capturing over three (3) million tons per annum of carbon dioxide from the Kasawari gas field offshore Sarawak);

It is anticipated that even with the most aggressive projections of renewable energy transition there will still be need for hydrocarbons to be part of the energy mix. Therefore, moving forward, Carbon Capture & Storage ("CCS") will be a key part of global transition to net zero carbon emissions. Ranhill Worley is committed to working together with our customers to navigate their energy transition process to decarbonize the extraction of hydrocarbons.

Ranhill shall continue to make strides towards realising its target of attaining 3,000 MLD of water, wastewater and reclaimed water treatment capacity by 2027 and continue to pursue our energy target of having 1,000 MW of generation capacity.

The Company's effective tax rate (excluding the results of associates which are equity accounted net of tax) for the quarter and current year to date were higher than the statutory tax rate substantially due to the non-allowable tax expenses of Sukuk interest.

In 2018, the new Finance Act 2018 which comes into effect on 26 December 2018, introduced a 7-Year Limitation on carry forward of unabsorbed business losses, unutilised reinvestment and investment allowances. Such ruling meant that RSEII can only utilise its unutilised investment allowance against any taxable profit up to year 2025, requiring a potential reversal of deferred tax asset to the income statement of RM38.8 million (2022: RM42.1 million).

RSEII, through its tax consultant, has since appealed to the Ministry of Finance ("MoF") to allow RSEII to utilise the investment allowance up to the end of the concession period in year 2032.

Management has consulted its solicitors who have advised that, based on the facts and circumstances of the approval of the investment allowance to RSEII in prior years, it is reasonable for RSEII to place reliance on such approval and continue with the utilisation of the investment allowance in full in accordance with its terms therein.
