## FGV HOLDINGS BERHAD

### QUARTERLY REPORT (CONTINUED)

#### **Explanatory Notes on the Quarterly Report – 30 September 2019** **Amounts in RM thousand unless otherwise stated**

This interim financial information of FGV Holdings Berhad ('FGV' or 'Group') is prepared in accordance with the requirements of paragraph 9.22 of the Main Market Listing Requirements of Bursa Malaysia Securities Berhad and complies with the requirements of the Malaysian Financial Reporting Standard ('MFRS') No. 134 – Interim Financial Reporting.

The Unaudited Condensed Consolidated Interim Financial Information should be read in conjunction with FGV audited financial statements for the financial year ended 31 December 2018. These explanatory notes attached to the Unaudited Condensed Consolidated Interim Financial Information provide an explanation of events and transactions that are significant to an understanding of the changes in the financial position and performance of the Group since the financial year ended 31 December 2018.

#### **1. Basis of Preparation**

The financial statements of the Group have been prepared in accordance with the Malaysian Financial Reporting Standards ("MFRS"), International Financial Reporting Standards ("IFRS") and the requirements of the Companies Act 2016 in Malaysia.

The accounting policies and presentation adopted for this Unaudited Condensed Consolidated Interim Financial Information are mainly consistent with those of the Group's audited financial statements for the financial year ended 31 December 2018, except for the following:

##### **(a) MFRS 16 "Leases"**

Under MFRS 16, a lease is a contract (or part of a contract) that conveys the right to control the use of an identified asset for a period of time in exchange for consideration.

MFRS 16 affects primarily the accounting by lessees and results in the recognition of almost all leases on the statement of financial position. The standard removes the current distinction between operating leases (off balance sheet) and finance leases (on balance sheet) and requires a lessee to recognise a 'right-of-use' of the underlying asset and a lease liability reflecting future lease payments for virtually all lease contracts. The only exceptions are for short-term leases and leases of low-value assets in which the payments are recognised on a straight line basis as an expense in profit or loss.

The standard affects primarily the accounting for the Group's leases previously recognised as operating leases under MFRS 117.

The right-of-use asset is depreciated in accordance with the principle in MFRS 116 'Property, Plant and Equipment' ('MFRS 116') and the lease liability is accreted over time with interest expense recognised in the profit or loss. The statement of profit or loss will also be affected because the total expense is typically higher in the earlier years of a lease and lower in later years. Additionally, as operating lease payment is replaced with interest on lease liability and amortisation of the right-of-use assets, key metrics like earnings before interest, taxation, depreciation and amortisation ("EBITDA") would have changed. Operating cash flows are higher as cash payments for the principal portion of the lease liability are classified within financing activities. Only the part of the payments that reflects interest can continue to be presented as operating cash flows.

For lessors, MFRS 16 retains most of the requirements in MFRS 117. Lessors continue to classify all leases as either operating leases or finance leases and account for them differently. The financial impact of the adoption of MFRS 16 on the financial statements of the Group are disclosed in Note 1(b).

**2. Seasonal or Cyclical Factors**

Global sales of oils and fats products follow a similar pattern where sales increases ahead of festivities due to increased consumer demand. In addition, the harvest of fresh fruit bunches (“FFB”) at palm oil plantations tends to increase in the second half of the financial year as a result of the rainfall pattern in Malaysia, which leads to a greater supply of CPO and PK during the second half of the financial year as FFB is immediately processed following its harvest.

Sales of refined oils and sugar products in Malaysia typically increase slightly during the months leading up to major holidays and festivals in Malaysia, especially Hari Raya and Chinese New Year, due to increased consumer demand for cooking oil and refined sugar.

**3. Unusual Items Affecting Assets, Liabilities, Equity, Net Income or Cash Flows**

During the quarter under review, the Group has recognised a provision of RM145.25 million for the impairment of certain plant and machinery of the Sugar Sector following the change in Group’s strategy and future plan of certain assets in response to the challenging business and economic conditions affecting the sugar industry. There were no other material or unusual items affecting FGV’s assets, liabilities, equity, net income or cash flows during the financial period under review.

**4. Material Changes in Estimates**

There were no other material changes in the estimates of amounts reported in the prior interim period of the current financial year or the interim period of the previous financial year that have a material effect on the results for the current quarter under review.

**5. Debt and Equity Securities**

There were no issuances, cancellations, repurchases, resale and repayments of debt and equity securities during the financial period under review.

**6. Dividends**

No dividend has been paid during the quarter ended 30 September 2019.

**7. Segment Information**

Operating segments are reported in a manner consistent with the internal management reporting provided to the chief operating decision maker (“CODM”), which is the Group Management Committee (“GMC”) (formerly known as Executive Committee).

The GMC considers the business by product related activities. The reportable segments for the financial year ended 30 September 2019 have been identified as follows:

- Plantation Sector - Plantation estates activities including cultivation, harvesting and production of fresh fruit bunches (“FFB”) and processing of FFB into crude palm oil (“CPO”) and palm kernel (“PK”), refining of CPO, fractionation of refined bleached deodorised palm oil (“RBDPO”) and Palm Olein (“PO”), crushing of PK, production of oleochemicals namely fatty acid and glycerine, production of graphene and nanotubes, processing and sales of biodiesel products, production of consumer bulk and packed products, trading of CPO, research and development activities, fertilisers processing, rubber processing and production and sale of planting materials.
- Sugar Sector - Sugar refining, sales and marketing of refined sugar and molasses.
- Logistics and Others (“LO”) Sector - Bulking and transportation facilities and services, engineering services, information technology, and travel.

The reportable segments have changed from the financial year ended 31 December 2018 due to the changes in the internal management reporting structure to the CODM. Comparatives have been restated to conform to the revised reportable segments.

Corporate HQ and Elimination mainly relates to the inclusion of investment holding companies within the Group and Group consolidation adjustments, which are not part of the operating segments.

The GMC assesses the performance of the operating segments based on profit before zakat and taxation.

**19. Fair Value Changes of Financial Instruments (continued)**

The fair value of financial instruments traded in active markets is based on quoted market prices at the statement of financial position date. The quoted market price used for financial assets held by the Group is the current bid price. These instruments are included in Level 1. Instruments included in Level 1 comprise primarily equity investments listed in Bursa Malaysia Securities Berhad or foreign stock exchanges classified as trading securities or available for sale and commodity derivatives quoted on Bursa Malaysia Derivatives Berhad for palm oil and other foreign commodity exchanges.

The fair value of financial instruments that are not traded in an active market (for example, foreign currency forward contracts) is determined by using valuation techniques. These valuation techniques maximise the use of observable market data where it is available and rely as little as possible on entity specific estimates. If all significant inputs required to fair value an instrument are observable, the instrument is included in Level 2. Instruments included in Level 2 comprise foreign currency forward contracts.

If one or more of the significant inputs is not based on observable market data, the instrument is included in Level 3. Instruments included in Level 3 comprise LLA liability and unquoted financial assets at fair value through other comprehensive income.

The following table presents the changes in Level 3 instruments during the financial period/year:

	Financial period ended <u>30 September 2019</u>	Financial year ended <u>31 December 2018</u>
<u>LLA liability</u>		
1 January	4,328,008	4,393,280
Fair value changes charged to profit or loss	278,437	233,379

- Fixed lease payments	(182,851)	(243,930)
- Share of profits	(4,902)	(54,721)
	<u>4,418,692</u>	<u>4,328,008</u>
<u>Financial assets through other comprehensive income</u>

Addition	3,442	31,425
Fair value changes	8,201	(18,671)
	<u>94,277</u>	<u>82,634</u>

Fair value changes for the LLA liability has been measured based on assumptions made on crude palm oil prices, palm kernel prices, average yield of fresh fruit bunches and mature and immature estate costs. Any changes on assumptions used will cause a material variation of the liability.

**25. Prospects**

The Group's multi-pronged transformation plan is on track with operational performance in the 3rd quarter showing sustained improvement.

CPO price is expected to be favourable for the rest of the financial year, driven by lower production and the impetus provided by the announcement of B20 implementation during Budget 2020. Indonesia's commitment to B30 is also a positive factor that will reduce stock levels of CPO.

The sugar business is still affected by high cost of raw material, refining cost and finance charges. However, the Group is finalising several measures to address these issues.

The Group expects to continue making inroads into procurement processes that will translate into substantial savings.
